Domestic Appliances not compatible with a Savaplug

Savaplugs are suitable

for the great majority of the wide range of domestic appliances, **including most frost free models** (provided they do not incorporate electronic controls).

A Savaplug should not be fitted

to any appliance other than a fridge, freezer or fridge freezer and is not suitable for refrigeration appliances that incorporate electronic controls including digital temperature display.

If your appliance is not compatible, it may be that your appliance may already incorporate the technology that Savaplug uses – this is especially true of newer energy saving models.

Compatibility

The appliances listed below are known to be incompatible, if your appliance is not on the list, it should be okay. If in any doubt, please get in touch with us (see below):

GUIDANCE NOTES – once installed:

5. Total maximum load must not exceed 2.25 amps/350 watts continuous or 50 amps for 10 milliseconds. These ratings are quite adequate for all known U.K. supplied domestic refrigeration appliances.
6. If applicable fit a fuse of the rating specified by the manufacturer of the appliance on which the SAVApug is to be used. The usual fuse rating is 13 or 10 amps. DO NOT FIT A 3 AMP FUSE
7. The red light on the SAVApug will illuminate to indicate savings are being made. In some cases it may illuminate all the time, sometimes with differing brightness, and, in other cases, may 'flicker'. All these variations indicate satisfactory operation. However, if the red light pulses slowly (about once a second) then contact us with details of the make and model of your appliance - you may need to return it.
8. As with any refrigeration appliance, check for normal operation a few hours after fitting your SAVApug. In the event of any abnormality, (That means **ANY** perceived difference, e.g. temperature, vibration, noise, etc) first check the fuse and, if this is not the cause please contact us to discuss the options.
9. In a few cases, the appliance internal; or indicator lights may flicker with the SAVApug fitted. This will cause no damage.
